

Handling hazardous substances

Philotech is active as an **engineering service provider for development and consultancy services**, especially in software developments for customers in various industries. When carrying out these development services, Philotech employees work exclusively **on-site in customer development offices** or in **Philotech project offices**.

When carrying out its day-to-day business, Philotech takes special care to **handle hazardous goods in a correct manner**. This includes:

- Proper disposal of electric and IT components
- Proper handling and disposal of toner and old batteries
- Proper handling of chemical substances (cleaning materials)

Philotech is **not a manufacturing industry**. For this reason, all measures for handling hazardous materials and chemical substances do not apply. Hazardous substances are not used in any way.

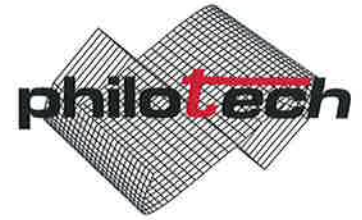

Consequently, any further measures for an environmental management system are not necessary.
